

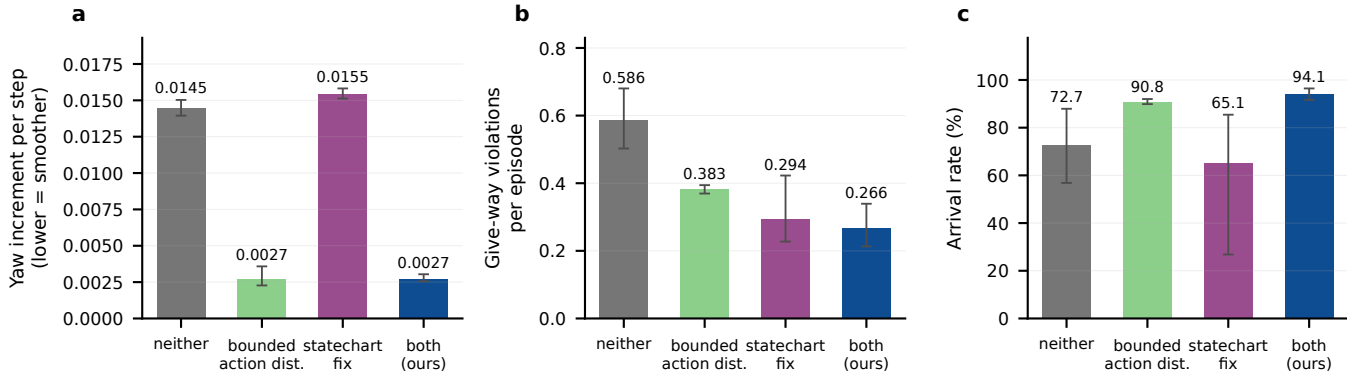

Fig. 2 | Ablation of the two mechanisms, paired on the 3 seeds shared by all four arms (seeds [0, 1, 2]). Bars, mean over seeds; error bars, 95% bootstrap CI resampled over seeds (B=20,000). a, Only the bounded action distribution removes rudder chatter — the statechart fix alone makes it slightly worse. b, The statechart fix is what drives give-way violations down. c, Neither alone reaches the arrival rate of the combination. 5.08M-step budget · last checkpoint · official test set (strict 563) · single machine, single pass
